# ADR008-Standard code formatter

## Status

accepted

## Context

For seamless working together on a shared code base it is advantageous to use the same code formatter. So a standard code formatter must be defined.

## Decision

The standard code format is defined in the file [formatter.xml](#). This XML is created as an [eclipse](#)-Formatter file, but can also be imported in other IDEs, such as Apache Netbeans or IntelliJ Idea.

## Consequences

Everyone who creates or changes source code for the GAME application in this repository, must use this formatter setup to format the source code.
