ADR001-BuildingFromScratch

Status

accpeted

Context

The ARZ wants to create a learning platform for their members. The project team evaluated possibly alternatives to adapt from. An alternative needs to be able to run on-premise, be up to date with todays standards and preferably be opensource. The evaluated systems are the following:

http://www.javaranch.com

- is based on "JForum" (a java forum)
- OpenSource
- Code is on SourceForge

```
-> doesn't meet the expectations
```

http://www.skill-guru.com

- no On-premise possible

```
-> therefore  excluded
```

http://www.betterprogrammer.com

- no further development, outdated (java version 1.5/1.6)

```
-> therefore not effective
```

http://www.javapassion.com

- no possibility for extensions
- developed by an individual person

```
-> therefore no viable option
```

Decision

None of the evaluated systems meet the requirements, so the system will be build up from scratch

by the project team.

Consequences

Development of a web application based on Java/Java Enterprise.
